

Classification of Entanglement using Knots

PH3203 Term Project

Sagnik Seth
22MS026

Jessica Das
22MS157

Sayan Karmakar
22MS163

Contents

1	Introduction	2
2	Classification of Links: A Polynomial Approach	2
3	Entanglement Classification	2
3.1	Obtaining a link from quantum state	2
3.2	Obtaining a state from a link	2
3.3	Applying to Three Qubit Systems	2
3.4	Applying to Four Qubit Systems	2
4	Physical Significance: Use in Quantum Networks	2
5	Discussion and Conclusion	2
	Appendix A: Quantum Information Basics	3
5.1	Density Matrix	3
5.2	Peres-Horodecki Criterion	3
	Appendix B: Knot Theory Basics	4

1 Introduction

2 Classification of Links: A Polynomial Approach

3 Entanglement Classification

3.1 Obtaining a link from quantum state

3.2 Obtaining a state from a link

3.3 Applying to Three Qubit Systems

3.4 Applying to Four Qubit Systems

4 Physical Significance: Use in Quantum Networks

5 Discussion and Conclusion

Appendix A: Quantum Information Basics

5.1 Density Matrix

5.2 Peres-Horodecki Criterion

Appendix B: Knot Theory Basics
